1. Degradation strategies and associated regulatory mechanisms/features for aromatic compound metabolism in bacteria	1
Prashant S. Phale, Harshit Malhotra, and Bhavik A. Shah	
1. Introduction	2
2. Transport and uptake of aromatic compounds inside the cell	7
3. Routes for degradation of aromatic compounds	8
4. Enzymes involved in the degradation of aromatic compounds	11
5. Metabolism of aromatic compounds	16
6. Regulation of metabolic pathway for efficient degradation	24
7. Chemotaxis	38
8. Preferential utilization of carbon sources	39
9. Compartmentalization of enzymes involved in metabolic pathways	40
10. Role of biosurfactants	41
11. Aromatic compounds and their metabolites as inhibitors	42
12. Diversity in the metabolic pathways	43
13. Evolutionary aspects	45
14. Conclusion	46
Acknowledgments	48
References	48
2. Peptidoglycan biosynthesis and remodeling revisited	67
Moagi Shaku, Christopher Ealand, Ofentse Matlhabe, Rushil Lala, and Bavesh D. Kana	
1. Introduction	68
2. Biosynthesis of the PG precursor	69
3. PG assembly	72
4. Penicillin binding proteins (PBPs)	73
5. Shape, elongation, division and sporulation (SEDS) proteins	74
6. L,D-Transpeptidases (LDTs)	75
7. The role of the bacterial cytoskeleton for PG biosynthesis and cell shape maintenance	76
8. MreB directs PG biosynthesis, cell growth and cell shape maintenance	77
9. FtsZ	79

10. Bacterial tropomyosin homologs and their role in PG biosynthesis, cell growth and cell division	80
11. Regulation of PG biosynthesis by protein-protein interaction	81
12. Regulation of PG biosynthesis by protein phosphorylation	83
13. Regulation of PG biosynthesis and remodeling by hydrolases	84
14. Enzymes required for PG remodeling	85
15. PG hydrolase regulation	86
16. PG recycling	88
17. PG recycling in mycobacterial species	90
18. PG recycling and β -lactamase signaling	91
19. Conclusion	95
References	95
3. Evasion of host defenses by intracellular <i>Staphylococcus aureus</i>	105
Kate E. Watkins and Meera Unnikrishnan	
1. Introduction	106
2. <i>S. aureus</i> infections and recurrence	106
3. Intracellular <i>S. aureus</i> : The evidence	107
4. Host cell adhesion and invasion by <i>S. aureus</i>	109
5. Bacterial factors modulating intracellular survival and replication	112
6. Staphylococcal small colony variants	118
7. Host cell pathways modulated during intracellular infection	120
8. Targeting intracellular bacteria	127
Summary	128
References	129
4. Antimicrobial resistance genes in bacteria from animal-based foods	143
Isadora de Alcântara Rodrigues, Rafaela Gomes Ferrari, Pedro Henrique Nunes Panzenhagen, Sergio Borges Mano, and Carlos Adam Conte-Junior	
1. Introduction	144
2. Cattle	147
3. Poultry	151
4. Swine	154
5. Fish	157
6. Milk and dairy	160
7. Eggs	164
8. Final considerations	166
References	167
