

Advances in
COMPUTERS

Volume **117**

*The Digital Twin Paradigm for Smarter Systems
and Environments: The Industry Use Cases*

Edited by

RETHURU RAJ AND PREETHA EVANGELINE

Series Editor

R. Hurson

Contents

<i>Preface</i>	<i>xi</i>
1. Stepping into the digitally instrumented and interconnected era	1
Pethuru Raj and Jenn-Wei Lin	
1. Introduction	2
2. Elucidating digitization technologies	5
3. Enlisting the recent happenings in the IT space	22
4. The connectivity and integration options	25
5. The promising digital intelligence methods	26
6. Envisioning the digital universe	30
7. Conclusion	32
References	32
Further reading	32
About the authors	33
2. Digital twin technology for “smart manufacturing”	35
Preetha Evangeline and Anandhakumar	
1. Introduction	36
2. Digital twin, what it is?	36
3. Integration	39
4. Digital twin business values	43
5. Conclusion	47
References	48
About the authors	49
3. The fog computing/edge computing to leverage Digital Twin	51
J. Pushpa and S.A. Kalyani	
1. Introduction	52
2. Illustrating the epoch-making IoT journey	55
3. The use cases of fog/edge computing	57
4. Fog and edge computing on digital twin	62
5. Facets of digital twin	65
6. Collaboration of fog computing	66

7. Collaboration with edge computing	68
8. Use cases of digital twin collaborated with fog	72
9. Benefits	75
10. Conclusion	76
References	76
Further reading	76
About the authors	77
4. The industry use cases for the Digital Twin idea	79
Peter Augustine	
1. Manufacturing	81
2. Industrial IoT	85
3. Healthcare	90
4. Smart cities	94
5. Automobile	97
6. Retail	100
Further reading	104
About the author	105
5. Digital twin: Empowering edge devices to be intelligent	107
Vidya Hungud and Senthil Kumar Arunachalam	
1. Introduction	108
2. Transitions in IoT space	114
3. Data analytics at realtime and @Edge—WHY?	114
4. Current trend in edge computing	115
5. Edge computing challenges	116
6. Why edge cloud analytics?	116
7. Edge cloud and its capabilities	117
8. Case study—Edge analytics platform and its capabilities	119
9. Cook book/user manual on edge analytics platform	121
10. Conclusion	125
About the authors	126
6. Industry 4.0: Industrial Internet of Things (IIOT)	129
Sathyan Munirathinam	
1. Introduction	130
2. Defining Industrial Internet of Things	131
3. IIoT architectures	135
4. Applications of IIoT	140
5. Securing Internet of Things	150

6. Challenges and opportunities	157
7. Future of IIoT	159
8. Conclusion	162
References	163
Further reading	163
About the author	164
7. The growing role of integrated and insightful big and real-time data analytics platforms	165
Indrakumari Ranganathan, Poongodi Thangamuthu, Suresh Palanimuthu, and Balamurugan Balusamy	
1. Introduction	167
2. Big data architecture	169
3. Real-time big data analytics platforms	171
4. Big data to smart data to digital twin	176
5. Real time applications	178
6. Challenges in real time big data applications	181
7. Conclusions	183
References	184
About the authors	185
8. Air pollution control model using machine learning and IoT techniques	187
Chetan Shetty, B.J. Sowmya, S. Seema, and K.G. Srinivasa	
1. Introduction	188
2. Literature survey	190
3. Design	197
4. Implementation and results	201
5. Conclusion	211
References	216
Further reading	216
About the authors	217
9. The human body: A digital twin of the cyber physical systems	219
Janet Barnabas and Pethuru Raj	
1. Introduction	220
2. Cyber physical systems	222
3. Biological systems	224
4. The systems of the human body	225

5. Bio-plausible cyber systems	231
6. Applications of digital twin	240
7. Conclusion	243
References	244
About the authors	245
10. Impact of cloud security in digital twin	247
Susila Nagarajan, Sruthi Anand, and Usha Sakthivel	
1. Introduction	248
2. Background study	249
3. Digital twin	252
4. Advantages of digital twin	253
5. Characteristics of digital twin	253
6. Cloud security techniques	256
7. Cloud security in digital twin	256
8. Impact of digital twin in aircraft	257
9. Use of Skyhigh	259
10. Applications of digital twin technology	260
11. Conclusion	260
References	261
About the authors	262
11. Digital twin in consumer choice modeling	265
D. Sudaroli Vijayakumar	
1. Introduction	266
2. Big data, machine learning and artificial intelligence in retail	267
3. Digital twin in retail	271
4. Drawbacks in traditional retail	274
5. Technologies to build digital twin	274
6. Conclusion	282
References	283
Further reading	283
About the author	284
12. Digital twin: The industry use cases	285
Pethuru Raj and Chellammal Surianarayanan	
1. Introduction	286
2. A recap of digital twin	288
3. Digital twin key drivers	290
4. Digital twins for the intelligent IoT era	292

5. The levels of digital twin (DT) maturity model	295
6. Digital twin industry domains	296
7. Enterprise-scale digital twins	297
8. Digital twin (DT) industry use cases	300
9. Digital twin applications	304
10. Digital twin benefits	306
11. A digital twin-centric approach for driver-intention prediction and traffic congestion-avoidance	307
12. The solution architecture description	314
13. Edge analytics-based virtual vehicle (VV) networks	315
14. The future	317
15. Conclusion	318
References	319
About the authors	319
13. Machine learning and deep learning algorithms on the Industrial Internet of Things (IIoT)	321
P. Ambika	
1. Introduction	322
2. IIoT analytics overview	323
3. Types of data	325
4. Challenges in IIoT	327
5. Need of contextual analysis in IIoT	328
6. Machine learning for contextual analysis	329
7. Role of analytics in IIoT	330
8. Naïve Bayes algorithm	331
9. Support vector machine (SVM)	331
10. Linear regression	332
11. Random forest (RF)	332
12. K-means clustering	332
13. Principal component analysis (PCA)	333
14. Canonical correlation analysis (CCA)	333
15. Neural networks	333
16. Monitoring	336
17. Behavioral control	336
18. Optimization	336
19. Self-healing	336
20. Summary	336
References	337
Further reading	338
About the author	338

14. Energy-efficient edge based real-time healthcare support system	339
S. Abirami and P. Chitra	
1. Introduction	340
2. Edge computing: Principles and architecture	343
3. Deep learning	346
4. Edge computing for health care application	358
5. Deep learning at the edge: Challenges and benefits	360
6. Proposed system	361
7. Cloud-edge paradigm	362
8. Early exit at inference	363
9. Conclusion	366
References	366
About the authors	367
