<b>1. Statistical modeling of intensive categorical time-series eye-tracking data using dynamic generalized linear mixed-effect models with crossed random effects</b>	<b>1</b>
Sarah Brown-Schmidt, Matthew Naveiras, Paul De Boeck, and Sun-Joo Cho	
1. Introduction	2
2. Introduction to the dynamic GLMM (dGLMM)	6
3. Data analysis	12
4. Discussion	26
Acknowledgments	28
References	28
<b>2. Beyond the picture frame: The function of fixations in interactive tasks</b>	<b>33</b>
Tom Foulsham	
1. Introduction	33
2. A walk down the street	35
3. Social gaze beyond the picture frame	39
4. Looking at objects	45
5. Interactive tasks from scene to screen	49
6. Conclusions	54
References	55
<b>3. Visual exploratory behavior and its development</b>	<b>59</b>
John M. Franchak	
1. Introduction	60
2. Visual characteristics contribute to ecological validity	64
3. Interactivity contributes to ecological validity	72
4. Embodied factors contribute to ecological validity	76
5. Conclusion	87
Acknowledgments	89
References	89

<b>4. Meaning and attention in scenes</b>	<b>95</b>
John M. Henderson	
1. Cognitive guidance of attention	98
2. Cognitive guidance, cognitive relevance theory, and the flat landscape	99
3. Investigating cognitive guidance: Meaning maps	101
4. Review of meaning map results	103
5. Conclusion	112
Funding	113
Acknowledgement	114
Conflicts of interest	114
References	114
<b>5. Eye movements during music reading: Toward a unified understanding of visual expertise</b>	<b>119</b>
Heather Sheridan, Kinnera S. Maturi, and Abigail L. Kleinsmith	
1. Theoretical perspectives on expertise and parafoveal processing	124
2. Parafoveal processing in music reading experts: Evidence from eye movements	129
3. The effect of task demands on parafoveal processing	138
4. Conclusions and future research directions	145
References	150
<b>6. Task-relevance is causal in eye movement learning and adaptation</b>	<b>157</b>
David Souto and Alexander C. Schütz	
1. Introduction to saccade adaptation and the double-step paradigm	158
2. Bottom-up and top-down control of saccades	162
3. Bottom-up error signals for saccade adaptation	163
4. Modulation of bottom-up driven adaptation by top-down signals	169
5. Top-down signals driving adaptation	172
6. Neural substrates	181
7. Outstanding questions	184
8. Conclusions	186
Acknowledgments	186
Reference	186

<b>7. Looking for your keys: The interaction of attention, memory, and eye movements in visual search</b>	<b>195</b>
Carrick C. Williams	
1. Why use eye movements to study cognitive processes and behavioral tasks?	197
2. Visual search and eye movements	201
3. Target definitions and eye movements	203
4. Real-world objects and scenes and visual search	208
5. Visual search, eye movements, and memory	213
6. Conclusions	222
References	224
<b>8. Changing perspectives on goal-directed attention control: The past, present, and future of modeling fixations during visual search</b>	<b>231</b>
Gregory J. Zelinsky, Yupei Chen, Seoyoung Ahn, and Hossein Adeli	
1. Defining the problem	232
2. Overview	237
3. The past (~2000–2010)	238
4. The present (~2010–2020)	246
5. The future (~2020–2030)	265
References	280
