
Advances in ATOMIC,
MOLECULAR, and
OPTICAL PHYSICS

Serial Edited by
Louis F. DiMauro
Hélène Perrin
Susanne F. Yelin

Volume 69

Contents

<i>Contributors</i>	<i>vii</i>
1. Tabletop attosecond X-rays in the water window	1
Seunghwoi Han, Jie Li, Zheyuan Zhu, Andrew Chew, Esben W. Larsen, Yi Wu, Shuo Sean Pang, and Zenghu Chang	
1. Introduction	2
2. Novel attosecond driving lasers	4
3. Isolated attosecond pulse generation in the water window	17
4. Characterization of attosecond X-ray pulses	27
5. Applications in element-specific ultrafast spectroscopy	42
6. Summary and outlook	53
Acknowledgments	53
References	53
2. Strong-field laser-induced fragmentation of small molecules from fast to slow	67
Philipp Wustelt, Matthias Kübel, Gerhard G. Paulus, and A. Max Saylor	
1. Introduction	68
2. Electronic dynamics in strong-field fragmentation	80
3. Vibrational dynamics in strong-field fragmentation	116
4. Rotational dynamics in strong-field fragmentation	133
5. Outlook	146
Acknowledgments	148
References	148
3. Ultrafast electron diffraction imaging of gas-phase molecules	163
K. Amini and J. Biegert	
1. Introduction	164
2. Elastic electron scattering	169
3. Field-free electron diffraction imaging	176
4. Field-induced electron diffraction imaging	189
5. Future outlook and challenges	221
References	226

4. Trapped Rydberg ions: A new platform for quantum information processing	233
Arezo Mokhberi, Markus Hennrich, and Ferdinand Schmidt-Kaler	
1. Introduction	234
2. Experimental approaches	241
3. Initialization of trapped ion crystals	244
4. Spectroscopy of Rydberg transitions	260
5. Coherent spectroscopy and control of Rydberg ions	270
6. Future prospects for Rydberg ion crystals	281
7. Outlook	294
Acknowledgments	296
References	296
