## Chapter 1

### Introduction

|       |                                                                                                     |   |
|-------|-----------------------------------------------------------------------------------------------------|---|
| 1.1   | Urbanization                                                                                        | 1 |
| 1.2   | Urban Sprawl                                                                                        | 2 |
| 1.2.1 | A brief on types of Urban sprawl, its characteristics,<br>causes, consequences and control measures | 4 |

|      |                                                 |    |
|------|-------------------------------------------------|----|
| 1.3  | Study Area                                      | 6  |
| 1.4  | Scope of the research work                      | 10 |
| 1.5  | Problem definition                              | 10 |
| 1.6  | Research Objectives                             | 10 |
| 1.7  | Solution Strategy                               | 11 |
| 1.8  | Remote Sensing                                  | 13 |
| 1.9  | Geographic Information System                   | 15 |
| 1.10 | Importance of RS & GIS in study of Urban Sprawl | 18 |
| 1.11 | Input Data                                      | 21 |
| 1.12 | Organization of the Thesis                      | 22 |
| 1.13 | Conclusion                                      | 24 |

## **Chapter 2**

### **Literature Review**

|       |                                                                                         |    |
|-------|-----------------------------------------------------------------------------------------|----|
| 2.1   | Introduction                                                                            | 25 |
| 2.2   | Urban sprawl, its types, characteristics, causes, consequences<br>and remedial measures | 30 |
| 2.2.1 | Types of urban sprawl                                                                   | 31 |
| 2.2.2 | Characteristics of urban sprawl                                                         | 32 |
| 2.2.3 | Causes of urban growth and sprawl                                                       | 34 |
| 2.2.4 | Consequences of urban sprawling                                                         | 37 |
| 2.2.5 | Mitigation strategies                                                                   | 40 |
| 2.3   | Image Classification                                                                    | 42 |

|         |                                                             |    |
|---------|-------------------------------------------------------------|----|
| 2.3.1   | Supervised, Unsupervised and Hybrid Classification          | 42 |
| 2.3.1.1 | Supervised Classification                                   | 42 |
| 2.3.1.2 | Unsupervised and Hybrid Classification                      | 52 |
| 2.4     | Data Clustering                                             | 58 |
| 2.4.1   | Unsupervised Clustering                                     | 60 |
| 2.4.2   | Supervised Clustering Approach                              | 64 |
| 2.4.3   | Semi-supervised Clustering                                  | 67 |
| 2.5     | Identification of critical factors influencing urban sprawl | 76 |
| 2.6     | Data Prediction Model                                       | 79 |
| 2.7     | Inference from Literature Survey                            | 79 |

## **Chapter 3**

### **Satellite Image Classification**

|       |                                                                |    |
|-------|----------------------------------------------------------------|----|
| 3.1   | Introduction                                                   | 82 |
| 3.2   | Objectives                                                     | 82 |
| 3.3   | Selection of remotely sensed temporal data and the seed points | 82 |
| 3.4   | Methodology pursued                                            | 83 |
| 3.5   | Unsupervised classification using ISODATA                      | 85 |
| 3.5.1 | Process Description                                            | 85 |
| 3.5.2 | Algorithm Description                                          | 87 |
| 3.5.3 | Advantages and disadvantages                                   | 88 |
| 3.5.4 | Experimental Run                                               | 88 |

|         |                                                    |     |
|---------|----------------------------------------------------|-----|
| 3.5.5   | Results                                            | 89  |
| 3.5.5.1 | Classification Results                             | 89  |
| 3.5.5.2 | Estimation of coverage of various classes          | 91  |
| 3.6     | Supervised classification using Maximum Likelihood | 93  |
| 3.6.1   | Process Description                                | 93  |
| 3.6.2   | Algorithm Description                              | 95  |
| 3.6.3   | Advantages and disadvantages                       | 96  |
| 3.6.4   | Experimental Run                                   | 96  |
| 3.6.5   | Results                                            | 97  |
| 3.6.5.1 | Classification Results                             | 97  |
| 3.6.5.2 | Estimation of Coverage of various classes          | 99  |
| 3.7     | Hybrid classification methodology                  | 100 |
| 3.7.1   | Process Description                                | 100 |
| 3.7.2   | Algorithm Description                              | 101 |
| 3.7.3   | Advantages and disadvantages                       | 102 |
| 3.7.4   | Experimental Run                                   | 102 |
| 3.7.5   | Results                                            | 103 |
| 3.7.5.1 | Classification Results                             | 103 |
| 3.7.5.2 | Estimation of coverage of various classes          | 105 |
| 3.8     | Brief of the results achieved                      | 106 |
| 3.9     | Accuracy Assessment                                | 107 |
| 3.9.1   | Calculating Error Matrix or Confusion Matrix       | 108 |
| 3.9.2   | Accuracy Assessment Results                        | 113 |

|         |                                                                                         |     |
|---------|-----------------------------------------------------------------------------------------|-----|
| 3.9.2.1 | Error matrix table for results of unsupervised classifier (ISODATA classifier)          | 113 |
| 3.9.2.2 | Error matrix table for results of supervised classifier (Maximum Likelihood classifier) | 116 |
| 3.9.2.3 | Error matrix table for results of hybrid classifier                                     | 119 |
| 3.10    | Conclusion                                                                              | 123 |

## **Chapter 4**

### **Seed Based Clustering**

|     |                                                                |     |
|-----|----------------------------------------------------------------|-----|
| 4.1 | Introduction                                                   | 125 |
| 4.2 | Objectives                                                     | 126 |
| 4.3 | Selection of remotely sensed temporal data and the seed points | 126 |
| 4.4 | Methodology pursued                                            | 126 |
| 4.5 | Results and discussion                                         | 132 |
| 4.6 | Conclusion                                                     | 139 |

## **Chapter 5**

### **Identification of Few Influential Parameters**

|     |                     |     |
|-----|---------------------|-----|
| 5.1 | Introduction        | 141 |
| 5.2 | Objective           | 142 |
| 5.3 | Methodology pursued | 142 |

|       |                                                                                |     |
|-------|--------------------------------------------------------------------------------|-----|
| 5.4   | Identification of critical factors influencing growth and statistical evidence | 142 |
| 5.4.1 | Identification of Demographic Factors                                          | 142 |
| 5.4.2 | Identification of some of the influential factors                              | 158 |
| 5.5   | Conclusion                                                                     | 162 |

## **Chapter 6**

### **Data Prediction and Suggestive Measures**

|       |                                                                                                           |     |
|-------|-----------------------------------------------------------------------------------------------------------|-----|
| 6.1   | Introduction                                                                                              | 163 |
| 6.2   | Some of the Statistical and Non-Statistical Prediction Models                                             | 163 |
| 6.2.1 | Statistical Models                                                                                        | 163 |
| 6.2.2 | Non-Statistical Models                                                                                    | 166 |
| 6.2.3 | Applicability of the Data Prediction Models                                                               | 167 |
| 6.3   | Objectives                                                                                                | 168 |
| 6.4   | Selection of datapoints                                                                                   | 168 |
| 6.5   | Methodology pursued                                                                                       | 169 |
| 6.6   | Results and discussion                                                                                    | 172 |
| 6.6.1 | Prediction of changes in the land cover classes obtained from classification of temporal satellite images | 172 |
| 6.6.2 | Prediction of changes in the cluster density around the 8 seed points                                     | 176 |
| 6.6.3 | Prediction of change in the distribution of population participation                                      | 180 |
| 6.6.4 | Prediction of change in the household distribution                                                        | 184 |

|     |                          |     |
|-----|--------------------------|-----|
| 6.7 | Some Suggestive Measures | 188 |
| 6.8 | Conclusion               | 189 |

## **Chapter 7**

### **Summary and Conclusion**

|      |                                                         |     |
|------|---------------------------------------------------------|-----|
| 7.1  | Introduction                                            | 192 |
| 7.2  | Chapter 1: Introduction                                 | 193 |
| 7.3  | Chapter 2: Literature Survey                            | 193 |
| 7.4  | Chapter 3: Satellite Image Classification               | 193 |
| 7.5  | Chapter 4: Seed Based Clustering                        | 194 |
| 7.6  | Chapter 5: Identification of Few Influential Parameters | 195 |
| 7.7  | Chapter 6: Data Prediction and Suggestive Measures      | 196 |
| 7.8  | Limitations of Research Work                            | 198 |
| 7.9  | Future Directions                                       | 198 |
| 7.10 | Conclusion                                              | 199 |
